## **Seeking Solar System Analogues**

*Abstract*: We aim to elucidate the uniqueness of the Solar System by characterising exoplanetary systems with Jupiter analogues through high-precision ESO/HARPS radial velocity observations of solar twins. Moreover, we study the possible connection between those planets and the chemical compositions of their host stars.

Advisor: Jorge Luis Meléndez Moreno, Ph.D.

## **Undergraduate Research Assistant**

08/2017 - 08/2021

## Time-series analysis of near-IR variabilities with the ESO/VVV & VVV-X surveys

Abstract: We examined relatively small photometric variations in the near-IR Ks-band light curves of the ESO/VISTA Variables in the Via Láctea (VVV) & VVV eXtended (VVV-X) surveys by implementing the Lomb-Scargle method for characteristically sine-like signals of variable stars, and the Box Least-Squares method to detect and model exoplanetary transit candidates on M dwarf stars, primarily selected based on VVV photometric and Gaia DR3 astrometric datasets.

Advisor: Roberto Kalbusch Saito, Ph.D.
